

CASE STUDY: Leading Property Management company gets 10x the value from IOT Water sensors.

WLD Sensors - WaterRope

Elevator Temperatures

A Industry Leader in Property

management deployed the EnviroSmarts wireless water leak detections system. In place of a hardwired solution the EnviroSmarts wireless technology allowed the deployment of 100 sensors targeting failure points at 1/10th the cost of utilizing the other hardwired system.

The other antiquated system only allowed 10 spots to be installed; our advanced technology provided expanded environmental data in conjunction with text and email alerts set on individual sensor thresholds.

We were able to add supporting environmental data with temperature and humidity for other

key mechanical and fluid delivery systems to provide additional loss avoidance measures.

Early detection and warnings can reduce the damage by as much as 96%, our instant text alerts can deliver these notifications.

Schedule a Live Demo and learn how EnviroSmarts can help virtually eliminate your water related damages.
